## Device Events LLC Launches Medical Device Adverse Event Reporting Service

York, PA USA — 3 January 2017 - Device Events, LLC announced today the commercial launch and availability of their cloud-based medical device recall and adverse event search, reporting, and analysis service.

*Madris Tomes  
Founder & CEO  
Device Events, LLC*

Device Events LLC, founded by Ms. Madris Tomes in 2015, provides a cloud-based software service that extracts, consolidates and provides easy access to clear and comprehensive information on the millions of medical device adverse event reports (MDRs) filed with the FDA.

Device Events provides users in healthcare organizations, law firms, insurance companies, financial firms, manufacturers and patient advocacy groups with the most up-to-date information available - so they can quickly identify problematic devices, understand the history, quantity, and severity of the related adverse events and make better, more informed decisions. The result is improved patient safety, better health outcomes and less risk for their organization.

“Over the past 18 months, we’ve developed a very powerful search, reporting and analysis service that provides easy access to adverse event information that isn’t available today. The lack of accessibility critically impacts patient safety and health outcomes for patients while simultaneously introduces unwanted financial risk for healthcare organizations,” notes Tomes, Founder and CEO of Device Events. “Having launched our new website and commercialized the product, we are now in the process of bringing Device Events to the broader market,” adds Tomes.

### **About Device Events LLC**

Device Events is a cloud-based software service that provides comprehensive and cost-effective access to the most up to date information available on medical device adverse events. Healthcare organizations, law firms, insurance companies, manufacturers, and patient advocacy groups alike can utilize Device Events to quickly identify problematic devices and understand the history, quantity, and severity of related adverse events. With the service, users make more informed decisions, resulting in better health outcomes and reduced risk for both patients and their organizations.
